IMAGING & ANALYSIS RIG

The Imaging & Analysis Research Interest Group (RIG) provides a forum for researchers across the spectrum of visual data analysis, from those that develop improved imaging methods to those that utilize imaging and visual analysis in their field. This RIG provides opportunity to exchange ideas, explore collaborations, organize for interdisciplinary funding opportunities, present early findings, and develop a research network across traditional departmental boundaries.

This symposium will enable you to meet PIs across campus with relevant interests and expertise, including potential new collaborators; to hear what they’ve been up to; and to seek expertise or help with your current research endeavors.

During our symposium we will highlight research from our members and we also have a special guest from the City of Austin (COA), Marbenn Cayetano, IT Business Systems Analyst with the Communications and Technology Management Department, who will share information about COA’s Open Data Portal. Join our event to learn more about the data that is available and how to access the data.

Friday, April 23 2021
11AM - 12PM

Welcome from RIG Chair
Paul Navratil
Texas Advanced Computing Center

Alan Bovik
Electrical and Computer Engineering

Sergey Fomel
Geological Sciences

Richard Ketcham
Geological Sciences

Special Guest from the City of Austin will share info about the City's Open Data Portal

RSVP for Zoom link
