Population Health Mixer

Wednesday, September 8, 2021
10:30 a.m. to 12:00 p.m. via Zoom

MD Anderson Cancer Center and UT Austin have launched a strategic partnership to foster cross-disciplinary research collaborations in multiple areas. A thematic area of interest that has surfaced at both institutions is population health. To kickstart this effort, we are organizing a population health networking mixer to identify areas of mutual interest across three principal areas that fuse research and practice:

1. Social drivers of health
2. Health communication, message design, and place-based interventions to build trust and engagement among populations
3. Cancer risk factors, including nutrition, obesity, and tobacco use

We invite all researchers, practitioners and other population health experts to participate. Our goals are to better assess our existing collaborations and identify strengths and opportunities for future research growth. We will start with brief research updates from both institutions, followed by breakout sessions organized by topic. We will also outline upcoming opportunities to apply for joint UT/MDACC pilot project funding to support emerging research collaborations between our institutions.
